AUTO TICKET CLASSIFICATION USING FLOW DESIGNER
IDEATION PHASE

1. PROJECT OVERVIEW

Project title: Auto Ticket Classification using Flow Designer.

The school IT helpdesk receives multiple incident requests from students and teachers, including Wi-Fi issues, projector failures, password problems and slow computers. The supplied project identifies manual ticket review and classification as a time-consuming process.

2. PROBLEM IDENTIFICATION

- Multiple IT support requests are received daily.
- IT staff manually identify the issue type and select Category and Subcategory.
- The manual process is time-consuming, error-prone and not scalable as requests increase.

3. IDEA IDENTIFICATION

The proposed idea is to automate ticket classification using ServiceNow Flow Designer. The system analyzes keywords in the incident Short Description and Description fields and automatically assigns the appropriate Category and Subcategory.

4. PROPOSED SOLUTION

- Create a structured IT ticket table.
- Use Category and Subcategory choice fields.
- Make Subcategory dependent on Category.
- Use Flow Designer to classify new tickets from predefined keywords.
- Send an automated email notification to the caller after ticket creation.

5. CLASSIFICATION CONCEPT

Keyword / Issue	Category	Subcategory
WiFi / Network	Network	Wi-Fi
Projector	Hardware	Projector
Password / Login	Access	Forgot Password
Slow / Hanging	Performance	Slow Computer

6. EXPECTED BENEFITS

- Reduced manual classification effort.
- Consistent ticket classification.
- Improved routing efficiency.
- No-code and easier maintenance.
- Potential for future scalability.

7. IDEATION OUTCOME

The ideation phase establishes a clear project concept: a no-code ServiceNow automation that classifies common school IT tickets and improves the helpdesk workflow.

Source basis: uploaded PDF “Auto Ticket Classification using Flow Designer”. No outside technical content has been added to the phase-specific descriptions.
