AUTO TICKET CLASSIFICATION USING FLOW DESIGNER
PROJECT DEVELOPMENT PHASE

1. UPDATE SET CREATION

1. Go to All menus → Search for Update set.
2. Under System Update Sets, select Local Update Sets.
3. Click New.
4. Name: Project Update Set.
5. State: In progress.
6. Application: Global.
7. Save the form.
8. Use Make This My Current Set.

2. CUSTOM TABLE DEVELOPMENT

9. Open All menus → Search for Tables.
10. Under System Definition, click Tables.
11. Click New.
12. Label: Incident WorkFlow.
13. Uncheck Create module.
14. Save.
15. Open Controls and enable Auto Number.
16. Save again.

3. FIELD CREATION

Create the fields defined in the requirements: Number, Caller, Category, Subcategory, Short Description, Description, State, Assigned Group and Assigned to, using the specified data types and references.

4. CHOICE CONFIGURATION

Add choices to Category, Subcategory and State and save the form.

5. DEPENDENCY CONFIGURATION

17. Open the created table form and configure the Subcategory dictionary.
18. Open Advanced view.
19. Enable Use dependent field.
20. Select Category as the dependent-on field.
21. Save the form.
22. Configure the documented dependent values for each subcategory.

6. FLOW CREATION

23. Open Flow Designer.

24. Select New → Flow.
25. Name: Auto Classify School IT Tickets.
26. Application: Global.
27. Click Build Flow.

7. TRIGGER CONFIGURATION

28. Trigger: Record Created.
29. Table: Incident Workflow.
30. Condition: Category is Empty.
31. Click Done.

8. CLASSIFICATION ACTIONS

Branch	Condition	Update Record
Wi-Fi	Short description contains Wi-Fi / Network	Category = Network; Subcategory = Wi-Fi
Projector	Short description contains Projector	Category = Hardware; Subcategory = Projector
Password	Short description contains Forgot password	Category = Access; Subcategory = Forgot Password
Slow Computer	Short description contains Slow Computer	Category = Performance; Subcategory = Slow Computer

9. EMAIL ACTION

- Action: Send Email.
- To: Caller → Email.
- Subject: Your Request for the issue has been submitted.
- Body: Ticket confirmation message.

10. FLOW ACTIVATION

After the required trigger, conditions, update actions and email action are configured, the flow is activated from the top-right corner.

11. DEVELOPMENT OUTCOME

The development phase converts the approved requirements and design into a configured ServiceNow table and Flow Designer automation.

Source basis: uploaded PDF “Auto Ticket Classification using Flow Designer”. No outside technical content has been added to the phase-specific descriptions.
