AUTO TICKET CLASSIFICATION USING FLOW DESIGNER

PROJECT PLANNING PHASE

1. TESTING OBJECTIVE

The objective is to ensure that the developed solution works as expected, meets functional requirements, validates data accuracy and follows basic security and access-control practices.

2. DATA VALIDATION

- Mandatory fields captured correctly.
- Auto-number generated without duplication.
- Category and Subcategory values stored accurately.
- Reference fields resolve correctly to user and group tables.

3. TEST SCENARIO 1 – WI-FI

Input: Caller Name and Short Description: “WiFi not working in library”. After saving and reloading the form, the documented result is Category → Network and Subcategory → WiFi. An email is sent to the caller email ID.

4. EMAIL VERIFICATION

1. Open All menus → Search Emails.
2. Under System logs, select Emails.
3. Search using the given subject name.
4. Open the email record.
5. Use Preview mail to inspect the message.

5. TEST SCENARIO 2 – PROJECTOR

Input: Caller Name and Short Description: “Projector not turning on”. After saving and reloading the form, the documented result is Category → Hardware and Subcategory → Projector. An email is sent to the caller mail ID.

6. SECURITY VALIDATION

The reference describes the phase as including basic security and access-control validation to ensure that only authorized users can access or modify ticket data.

7. TESTING OUTCOME

The documented test scenarios verify the classification and email behavior for representative Wi-Fi and projector tickets.

Source basis: uploaded PDF “Auto Ticket Classification using Flow Designer”. No outside technical content has been added to the phase-specific descriptions.
