AUTO TICKET CLASSIFICATION USING FLOW DESIGNER

REQUIREMENT PHASE

1. PROJECT OVERVIEW

The requirement analysis phase defines what the Auto Ticket Classification system must accomplish for the school IT helpdesk.

2. BUSINESS REQUIREMENTS

1. Automatically classify IT tickets based on the issue description.
2. Assign Category and Subcategory without manual intervention.
3. Support dependent choice logic between Category and Subcategory.
4. Send an automated email notification to the caller upon ticket creation.
5. Store ticket information in a structured and standardized format.
6. Ensure easy maintenance and future scalability.

3. FUNCTIONAL REQUIREMENTS

- Create and store IT ticket records.
- Capture Caller, Short Description and Description.
- Classify tickets using predefined keywords.
- Update Category and Subcategory automatically.
- Maintain dependent Category/Subcategory choices.
- Send a confirmation email to the caller.

4. DATA REQUIREMENTS

Field	Type	Values / Reference
Number	Auto Number	—
Caller	Reference	sys_user
Category	Choice	Network, Hardware, Access, Performance
Subcategory	Choice	Wi-Fi, Projector, Forgot Password, Slow Computer
Short Description	String	—
Description	String	—
State	Choice	New, In progress, On hold, Resolved, Closed

Assigned Group	Reference	sys_user_group
Assigned to	Reference	sys_user

5. NON-FUNCTIONAL REQUIREMENTS

- Maintainability: configuration should be easy to modify.
- Scalability: support future categories and automation.
- Data consistency: structured Category and Subcategory values.
- Usability: minimize manual classification.
- Access control: authorized users should access or modify ticket data.

6. REQUIREMENT ANALYSIS OUTCOME

The requirement analysis provides the baseline for designing and developing the ServiceNow solution, including its data model, automation logic, notification and validation requirements.
